Shaun Rhodes

Ask around the school

Shaun Rhodes

Ask bus drivers how their system works in terms of who to track and why only one bus at a time.

Shaun Rhodes

Ask people on the buses while I ride.

Shaun Rhodes

Maybe get some help from students to make the app better and better with many new ideas

Shaun Rhodes

Transloc interface

Why is only one bus tracked at a time for each route?

Shaun Rhodes

Estimated times cannot always be trusted due to other possible obstacles during the route making you wait soooo much longer

Shaun Rhodes

Add something to calculate which bus has the faster route for your location based on number of stops, traffic, and distance

Shaun Rhodes

Students should "check in" to a bus stop to give students notifications on the bus status and times

Shaun Rhodes

Why not state when something may be causing the bus to be late on their route

Shaun Rhodes

Add "user feedback" to report issues that may impede times.

Shaun Rhodes

The routes in general
Have bus routes even more split up between buses, so that some routes aren't as long of a wait to get to your destination

Shaun Rhodes

The bus driver shouldn't stop at a stop unless there are people there, or the cord was pulled, unless it is a "popular" spot

Shaun Rhodes

Maybe add a tracker for drivers when students check in so buses can also decide where to stop beforehand

Shaun Rhodes

Platform

Emails sent to the school

Shaun Rhodes

Present to university maybe through PowerPoint in front of higher ups

Shaun Rhodes

Maybe social media?...

Shaun Rhodes

Outside perspective
Look at other public bus routes around the city and other cities and how they are tracked

Shaun Rhodes

Look at other colleges and universities that also have bus transportation and their apps if applicable.

Shaun Rhodes

Ask opinions of students from other universities on how their bus systems work for them.
